

JCU Staff Mechanism of Injury

- Muscular stress (18) and slips, trips & falls (14) have been the most frequently reported mechanism of injury for staff in 2022 so far which is consistent across the Australian workforce (source: SafeWork Australia). These categories are broad and encompass a range of causes.
- Of the muscular stress injuries, nine were as a result of manual handling tasks and nine from repetitive computer activities
- Of slips trips and falls find out more information
- In response to these injuries the WHS Injury Prevention & Management Advisors have completed hazardous manual task risk assessments, job task analyses and ergonomic assessments, education and support through Workers Compensation with staff.

Excludes Near Miss incidents, Near Miss Incidents do not result in injuries
