

ARE YOU PLANNING TO STUDY A UNIVERSITY DEGREE?

Studying Specialist Maths with Maths Methods and passing them as well as you can is your best preparation for doing well at University.

— STUDYING ONLY MATHS METHODS

Maths Methods will get you into a University degree but you'll find it hard to pass.

Most students who complete only Maths Methods at high school are not well prepared for first year University maths in degrees like **Engineering, Science, or Secondary Maths teaching**. That means that most students with only Maths Methods do not pass University maths on their first attempt.

+ STUDYING MATHS METHODS AND SPECIALIST MATHS TOGETHER

You're well prepared to take on University maths if you do well in both Maths Methods and Specialist Maths.

Those students who take Specialist Maths with Maths Methods are far better prepared for maths at University. The majority of students who take both maths subjects at high school pass first year University mathematics.
