

Considering an Honours degree in Earth Sciences?

If you are considering studying Honours in 2018, come along to the information session where you can learn about what an Honours year involves, how to enrol, the expected outcomes and discuss research projects with a potential supervisor.

As an Honours student you'll be encouraged and supported as you learn to seek out your own answers. From an employer's perspective, whatever your topic, it is appealing to have a demonstrated ability in writing coherently, achieving a complex goal, investigating independently, using resources effectively and meeting deadlines.

There are many good reasons to spend a year researching a particular question in depth and it is a great way to understand how scientific research is conducted.

Friday 1st September 2017

3.30 – 5pm

**Townsville Campus
034-021 (follows on from EA3800 prac.)**

The session will be followed by pizza with the staff to allow more time to discuss available projects in 2018.
