LearnJCU Exemplars

Good practice design for instruction, student experience, and accessibility.

Background

The design elements, principles and rationales included in this resource are based on Australian and international evidence-informed best practice guidelines. These guidelines foster student access, engagement, learning and experience, and contribute to quality of online learning.

The following frameworks and evidence-based literature have informed this resource:

- Technology Enhanced Learning Accreditation Standards ([TELAS](#))
- Quality Matters ([QM](#)) Higher Education Rubric
- Opportunity through online learning: Improving student access, participation and success in higher education (National Centre for Student Equity in Higher Education [NCSEHE]) – these are [ten National Guidelines](#) for improving student outcomes in online learning
- Threshold Standards for Online Learning Environments (Australasian Council on Open, Distance and e-Learning [ACODE])
- Guidance note: [Technology-enhanced learning](#) (Tertiary Education Quality and Standards Agency [TEQSA])

LearnJCU Exemplars

Good practice design for instruction, student experience, and accessibility.

Eight core focus areas

Good Practice in LearnJCU Site Design:

Good practice design includes the following eight (8) core focus areas. These focus areas are those that align with best practice quality learning design and governance frameworks and contribute significantly to students' learning experience and success.

Subject Orientation

Learning Outcomes

Assessment

Learning materials

Learning activities & interaction

Use of technologies

Learner support

Accessibility

Occupational Therapy

OT1011 Introduction to Occupation and Occupational Therapy

The purpose of this subject is to establish an understanding of the meaning and concept of occupation and to be able to apply an occupational perspective to human situations.

Students will engage with the occupational therapy community and identify the foundational processes that underpin occupational therapy practice for enabling change.

LEARNJCU SITE DESIGN HIGHLIGHTS

Assessment

Use of technologies

Learner support

Assessments in this subject are varied and each includes a clear task description and LearnJCU rubric. One of the assessment items is a multi-mode group assessment where students are required to create an oral presentation supported by a written poster. For this group task, students are provided with a range of resources to support their successful completion of this task. These supports include a narrated 'hints and tips' presentation created in H5P, information for how students can create videos using Panopto, as well as an exemplar and poster template that guide students' creation of the poster.

Assessment item 3 - Oral Presentation - Written Poster

Poster Template

Use this template as a guide to complete your poster. Students may make variations to the template. Creativity for your poster is encouraged, however, we do not mark creativity or style per se. Your design choices should contribute to the communication of your message.

Poster template.pptx

Example Poster

Attached is an example poster. Use this example poster as a guide to create your own poster. Please note this is not representative of a specific grade.

Poster example.pdf

Assessment

Use of technologies

Learner support

As this assessment is a group task, students' development of teamwork skills are scaffolded and supported. Resources are located in the 'teamwork resources' content item and include templates and examples of meeting minutes, team norms and group contracts. Use Panopto to create digital submissions to LearnJCU. Students are provided with supporting resources to for how to create videos using Panopto and how to submit videos for assessment. Supporting students to create video content contributes to developing their digital skills.

 Group Contract Blank Template.docx   ... 

To further support students' teamwork skills and to help monitor group progress, the subject coordinator enabled [class conversations](#) communication tool for this assessment item in LearnJCU. If the class conversation tool is activated on a group assessment item, then students of that group and teaching staff can converse with each other in a chat like panel and can also enter a Collaborate session together. For this assessment, peers in assessment groups were able to collaborate and communicate via a discussion board including sharing resources, posting meeting minutes and meeting in a private Collaborate room. The lecturer was able to monitor group progress and provide support and guidance to the groups where needed

The screenshot shows the LearnJCU interface for 'Assessment item 3 - Oral Presentation - Written Poster'. The left sidebar lists resources: 'Cover sheet', 'Oral Presentation / Written Poster - Resources', 'Teamwork Resources', 'Presentation Recording Resources', and 'Oral Presentation / Written Poster - Dropbox' (due 25/05/2022 10:00 am, 28 groups). The main area shows the assessment description: 'The purpose of this assessment is to investigate the changes in an individual's occupational life course/ repertoire over time and explore the range of factors that have influenced those changes.' On the right, a 'Group 25' conversation panel is open, showing a chat interface with a 'Type a response' input field. Below the input, there are messages from users, including a post from 7/04/2022 11:28 am with a file 'Assessment Item 2 - Poster.pptx', and a post from 21/03/2022 12:07 pm with a file 'Meeting Agenda and Minutes 1st Meeting.docx'. A blue callout box with an arrow points to the 'Group 25' dropdown menu, containing the text 'Access to private group Collaborate room'.

HS5800 Introduction to Lifestyle Medicine

In this subject introduces students to the role of lifestyle and social factors in physical and mental health and illness, including the evidence and scientific understanding for these bio-psycho-social-cultural determinants. Key lifestyle and social factors explored in this subject include nutrition, physical activity, sleep, mindstates and mindsets (e.g. stress management, meditation, tobacco and substance dependence, social connection and technology).

Emphasis is placed on health communication and translation that uses the content knowledge to build real workplace skills required in this modern era.

Subject orientation

A learning module content item has been used to structure important subject orientation information. A short welcome video introduces the teaching staff and establishes the teaching presence. Included is LearnJCU site navigation information which helps students know where to find information. The Subject Outline is prominently displayed, and students are provided with an outline of the subject structure. These provide students with important subject information, dates and expectation about their learning journey. The inclusion of an introductory discussion board, with instructions for how to use discussion boards, contributes to the building of a learning community and students’ digital literacy skills.

Welcome to HS5800: Introduction to Lifestyle Medicine. This is the very first offering of this subject in the new Lifestyle Medicine suite JCU and we are excited that you have enrolled.

Over the next 13 weeks, you will learn about a range of fundamental principles and practices associated with Lifestyle Medicine. This will provide you with a broad overview of the discipline and equip you with some basic tools, strategies and approaches to adopt in your everyday life and practice with clients or patients.

The information in this 'Start Here' folder is essential and it is important that you engage with the materials included in the next few pages as this will get you off to the best start possible in this subject.

Take some time to explore the rest of the subject site. You may notice a small 'W' icon next to uploaded files or at the top of pages. By clicking on this icon you can access a range of alternative formats for that information (e.g. HTML, audio). To find out more please go to the [Alternative Formats](#) page.

Meet the staff

Dr Sam Manger (Subject Coordinator)

Dr Sam Manger is a General Practitioner, Senior Lecturer and Academic Lead in General Practice and Lifestyle Medicine with James Cook University, Ambassador for Equally Well Australia, President of the Australasian Society of Lifestyle Medicine (ASLM) and host of The GP Show podcast [thegpshow.com](#). In 2021 he was awarded RACGP General Practitioner of the Year, QLD, for his commitment to the field of medicine and general practice.

Sam can be contacted via email at sam.manger@jcu.edu.au.

 **Watch: Welcome video**

In this video, Dr Sam Manger, HS5800 Subject Coordinator welcomes you to the subject and provides a brief overview of the content, teaching approaches, assessment and expectations.

Welcome to the Lifestyle Medicine subjects!

Dr Sam Manger

Discussion Topic

Learning Community: Introduction Discussion Board

This subject provides you with an opportunity to create new networks with peers and health professionals across diverse contexts. As part of establishing a learning community, we would like you to introduce yourself on the discussion board on the following page.

Purpose

In this discussion, you will practice using the discussion tool while getting to know your peers.

Task

We would like you to respond to the following questions:

1. What is your health profession and where are you located?
2. What sparked your interest in Lifestyle Medicine?

Action

Introduce yourself to your colleagues and share your response to the questions. When adding your response, you can use, for example, text, audio, video, an image, or a file. Try the different methods of submitting a response to the discussion board.

If you are unfamiliar with using discussion boards in Blackboard Ultra, please watch the video below.

Learning materials

Accessibility

Weekly Ultra Learning Module content items have been used to organise the learning content into logical learning sequences which aids navigation and readability. Each week, content within the Learning Modules are presented in a simple and consistent manner aligned with the 5E’s model for guided inquiry. Each week, students move through ‘discover’. ‘investigate’ and ‘evaluate’ learning content.

☐ Week 3 - Mindsets and stress management Part 1

This week we will explore aspects of stress, resilience and mental wellbeing

☐ 3.1 Discover

☐ 3.2 Investigate

☐ 3.3 Evaluate

☐ Week 3 Check in Journal

 Activity: Week 3 check in journal We have covered a lot of content in the first three weeks of HS5800. If you are feeling busy, don't worry - this is very typical and completely understandable. This is a good time to reflect on the past three ...

Learning materials

Learning outcomes

Learning activities & interaction

Accessibility

In the **‘discover’** phase, students engage with ‘hook’ content designed to motivate their interest in the topic and explore introductory concepts. Introductory text connects learning from the previous week with the current week. Weekly learning outcomes provide students with the main learning required for the week. Students are provided with directions of what activities they are required to complete for the week.

A simple learning preparation activity enables students to engage in initial topic learning and motivates their interest. The activity is clearly structured, so students understand the purpose of the activity, the task and what actions they need to complete. Students can access alternative file formats for the accessible PDF. Appropriate headers structures have been used to organize content.

In this example, students complete a short multi-question quiz to check their understanding of the key concepts. This quiz has been created using a H5P question set item. Students complete the quiz as many times as they need and are provided with automated feedback.

Welcome to week 8 of HS5800. Last week we explored various topics associated with physical activity. No doubt by now in week 8, you are feeling a little fatigued which is why our topic this week is very timely. This week we move onto exploring the topic of **sleep**. In particular, we will explore the physiology of sleep, why sleep matters, sleep disorders, and sleep assessment and prescription.

Weekly learning outcomes

By the end of this week you will be able to:

- Describe common sleep disorders including symptoms, physiology and impacts on health;
- Undertake sleep assessment for health clients;
- Prescribe evidence-based sleep therapies for health clients.

This week you will be required to:

1. Complete the short preparation and learning activities
2. Engage with the lecture materials;
3. Reflect on your learning.

Week 8: Preparation Activity

Purpose: To introduce you to key concepts associated with sleep.

Task: Explore this [Sleep health webpage](#). Consider doing the online sleep assessment, or alternatively completing the attached "Pittsburgh Sleep Quality Index" for yourself

Pittsburgh Sleep Quality Index.pdf

Action: Check your knowledge about some of the key sleep concepts by completing the short quiz below.

[Edit](#) [Reports](#)

Which of the following are symptoms of sleep deprivation? Select all that apply.

☐ Increased motivation

☐ Lower libido

☐ Moodiness

☐ Yawning

☐ Slow reaction time

☐ Craving proteins

☐ Difficulty thinking and learning

[Check](#)

[Next](#)

[Reuse](#) [I am confused](#)

Learning materials

Use of technologies

Learning activities & interaction

Accessibility

In the **‘investigate’** phase, students engage with short lecturer-created pre-recorded (approx. 10mins) videos created using Panopto with captions enabled. The provision of clear directions and video lengths helps students plan their learning. Students are provided with multiple means of representation of the pre-recorded lecture materials which aligns with Universal Design for Learning (UDL) principles (i.e. video with automated captions; accompanying accessible powerpoint slides where students can access alternative file formats using the A icon next to the file. Appropriate headers structures have been used to organize content.

Students also participate in active learning and authentic activities where they can apply their learning and have the opportunity to collaborate with peers and the lecturer asynchronously via discussion forums, including Ultra journals and Padlet. In this example, students engage with Padlet in-line created using a H5P i-frame embedder item.

Actions

1. Watch the lecture videos. A copy of the slides used in the presentations are available for download below each video.
2. Complete the 'Device and Social Media Use' padlet and the 'Mindfulness' Activities.
3. Complete the week 10 'check your understanding' activity on the next page.

Lecture content

This week you will have four (4) pre-recorded lectures to watch.

Watch: Lecture 10a - Social media use

Video length: Approx 12mins

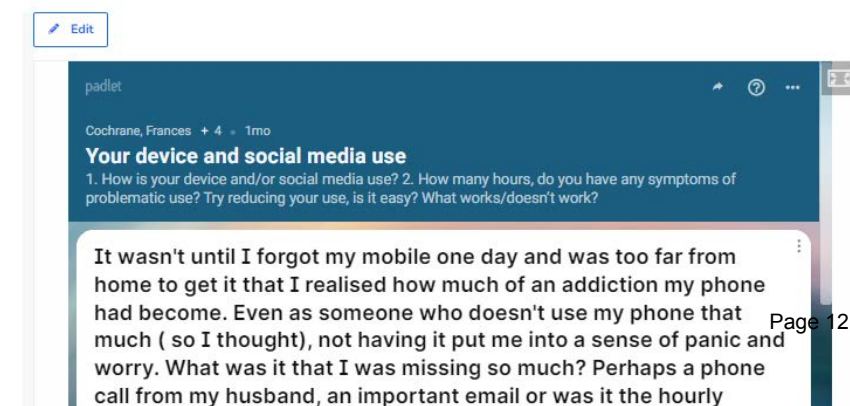

Activity: Your device and social media use

This is your opportunity to reflect on your own device and social media use. Use the reflective questions below as a guide and add your responses and reflections to the Padlet.

1. How is your device and/or social media use? How many hours, do you have any symptoms of problematic use?
2. Try reducing your use, is it easy? What works/doesn't work?

On the Padlet below (or via [this link](#)), share your thoughts and reflections about the prompt questions above.

To add a response, click onto the plus sign below each heading. Use the scroll function at the bottom of the page to scroll left/right.

HS5800 Introduction to Lifestyle Medicine

Learning design

Learner support

Learning activities
& interaction

Use of technologies

In the ‘**evaluate**’ phase, a summary of the key concepts for the week is provided and students engage in short reflective activities to check their understanding of the content and self-monitor their progress towards achieving the learning outcomes. The examples below showcase the use of an Ultra Journal and H5P document item to help students reflect on their learning and assessment progress at key points in the semester (e.g. pre-census and mid-point). These activities enable the lecturer to provide individual support where required. The third example is a check your understanding short quiz with automated feedback created using a H5P Question Set item.

Three weeks of learning down! This week you explored aspects of stress and how to manage it. By the end of week 3, there is no doubt you are likely feeling a little stressed by the end of week 3. This week you will reflect on your learning journey to date and identify strategies to manage stress for the next 10 weeks.

Activity: Week 3 check in journal

We have covered a lot of content in the first three weeks of HS5800 and you may be feeling pretty normal and understandable. This is a good time to reflect on the past three weeks of your study and assessment planning approaches and self-care practices. Reflect on what aspects you might need to improve.

In the journal on the next page, please respond to the following reflective questions:

- What aspects of the subject have you enjoyed so far?
- How well prepared for the assessment tasks do you feel?
- Are there any points or content that you are unclear about and require further support?
- Do you feel you need support at this time?

NOTE: Your journal entry is only seen by yourself and your lecturer.

This week we explored a range of topics associated with **physical activity** including measurement, recommendations, assessment and prescription.

Activity: Assessment task reflection and planning

You have already completed one assessment task in HS5800. The two remaining assessment tasks are due in week 9 (Assessment item 2 Part 1), week 10 (Assessment item 2 Part 2) and week 13 (Assessment item 3). As these final assessment tasks are fast approaching, now is a good time to reflect on your learning and establish a plan/goals working towards completion of your remaining two assessment tasks.

Complete the reflection and goal setting activity below. At the completion of the activity, you will be able to download your plan. You will not be able to save your work once you commence the activity therefore you will need to complete the activity in one attempt. This activity should take you less than 15 minutes.

EditReports

Week 5 reflection and assessment planning

Reflection and assessment planning

Assessment plan

Action priority page

Done

Reflection and assessment planning

You have already completed one assessment task in HS5800. The two remaining assessment tasks are due in week 9/10 and week 13. Now is the time to reflect on your progress to date and establish a prioritised plan for working towards completion of your remaining assessment tasks.

For a detailed task description of these two assessments, please refer to the subject outline.

Over the past two weeks we have explored aspects of addiction including a focus on substance use disorders such as alcohol and smoking use.

Activity: Check your understanding

Check your understanding of the key concepts explored this week by completing the short activity below. You can complete the activity as many times as you like. Review whether your responses are correct or not by clicking onto the 'check' button under each question. Move to the next question by clicking onto the arrow on the right hand side of each page.

Diploma of Higher Education

CS1022 Learning in a Digital Environment

The subject aims to develop the digital literacy skills required to select and use appropriate tools and technologies for learning and research purposes as well as communicating information, including the use of mobile devices. Through experiential learning activities, you will develop the necessary skills to use computers and other information communication technologies that are integral to learning and success at university.

The subject also introduces students to the LearnJCU platform, exploring its functions and uses across different disciplines. This subject will enable students to apply practices that ensure their safety in a digital environment.

Subject orientation

Learner support

This subject sets expectations from both the staff and student point of view. Important guidelines and the subject outline are made available right from the start of the teaching period.

About this subject

What we expect of you in this subject

Aims of this subject

What you can expect from us

Townsville Learning Centre

What you can expect from us

- We will provide support as much as is reasonable in a university context
- We will behave in a professional manner at all times
- We will introduce the skills needed for you to meet the expectations of each assessment piece
- We will support you to understand the requirements of each assessment piece
- We will provide scaffolded support through lectures and tutorials
- We will provide a range of learning opportunities and strategies

Subject Outline:

Your subject outline contains your subject calendar, details on your classes and assessments, due dates and assessment rubrics. It also contains information on teaching, learning, and student support at JCU.

This is your most important subject document. Read your subject outline carefully and consult it throughout the course.

CS1022_SP1_TSV_2019 Subject Outline

Diploma Attendance & Leave Guidelines

This document outlines the attendance requirements of the DHE. It also describes what to do if you cannot attend due to illness or unforeseen circumstances and describes how to go about applying for leave during semester.

Attendance and Leave Guidelines

Learning materials

Learner support

Students engage in subject content and activities design to encourage the development of a digital identity, keeping safe and acting responsibly and ethically online.

Digital Identity

Managing your digital identity involves understanding of how to develop and manage a professional online presence, how to manage online profiles and how to protect your personal data. By the end of this week you will be able to:

- maintain privacy in online environments
- manage your digital footprint
- develop and maintain a professional online presence.

The content from this week will also help inform your work in the final digital literacy module (Digital Identity) and lay the foundations for your ePortfolio.

Workshop Slides

CS1022 week 9 workshop

Your digital identity

In this video journalist Pernille Tranberg talks about the process of taking control of your digital identity and how to manage your online persona(s).

Using a site such as [LinkedIn](#) to create a digital CV is one way of developing your professional online presence, that will also enable you to connect with others in your field and explore job opportunities. Following researchers/professionals via social media and exploring opportunities for student memberships to professional bodies (like [Engineers Australia](#) or [The Australian Sociological Association](#)).

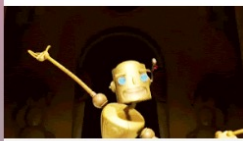

Learning activities & interaction

Use of technologies

A combination of 3rd-party and integrated tools promotes regular, active learning. These activities take the student beyond a basic **read-watch-respond** format. The examples below include Padlet, H5P quizzes and a 3rd party tool.

4
- JUST. KEEP. GOING.**
Make sure that when you finish one assignment, that you move straight onto the next one! Nothing worse than getting lazy and having to get back into study habits!!
- PYJAMA PARTY**
If you're having a bad day, Just turn up in PJ's, As long as you keep turning up you'll be okay!

Consider the following scenario:
You've been asked to investigate the impact of socioeconomic status, age, and location on students' use of technology during university study. Research from scholarly sources has led to the development of the following argument:
Socioeconomic status, location, and age can impact people's ability to access and use online resources effectively. Students who do not have strong computing skills are more likely to struggle when completing their courses. Therefore, technical training can be used to reduce inequity.
You have sources to support your argument. However, you also need data to demonstrate the extent to which these issues are impacting Australian university students.

Which of the following data-sets would be most useful in supporting your argument?

- ☐ Historical interview data on the development of internet technology
- ☐ Quantitative data on the number of international students enrolled
- ☐ Census data indicating internet usage and location among the general population
- ☐ Anecdotal data on students' social media habits
- ☐ Quantitative data on students' socioeconomic status
- ☐ Qualitative interview data documenting student responses to technology
- ☐ Demographic data indicating age and location of university students
- ☐ Financial data on university revenue

Subject orientation

The subject coordinator has provided valuable information that introduces students to the subject, highlights key activities and provides an overview of the learning sequence used in the subject in diagrammatical form. This consistency supports students to understand workload expectations and predict weekly progress. A short lecturer-created welcome video using Panopto introduces the teaching staff and establishes the teaching presence.

Hi Everyone

Welcome to CH1020 Preparatory Chemistry.

My name is [Murray Davies](#) and I am the lecturer/coordinator/facilitator for CH1020 Preparatory Chemistry. As the facilitator I am the one to answer all your questions about the subject as a whole.

Can I ask students to PLEASE use your JCU email account for all correspondence.

Also, please put the subject code CH1020 in your subject of the email.

Below is where you will find all the necessary information about the subject.

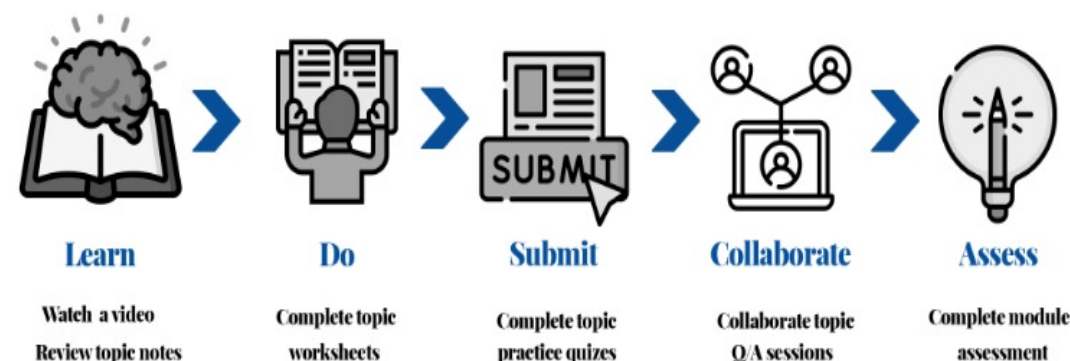

For many of you CH1020 will be the first university subject that you have taken. University is different to school where the onus is on you to learn the subject content. This means you need to find a study routine that works for you. Getting organised is key to this objective.

This subject content is split into **11 lecture content topics**. You will be asked to complete a number of learning activities that are designed to teach you the material described in each topic and then check your understanding of that topic. There are **4 components to the overall assessment**:

- an **online quiz** at the end of Topics 1-10, coupled with an **attendance mark** at the face-to-face tutorials (5 % each)
- **three in-class tests**, the first covering Topics 1 and 2, the second topics 3 and 4 and the third covering Topics 5, 6 and 7. The total of these three tests is 20%.
- **Four Practical experiments**. These are assessed by filling in the laboratory laboratory manual and a short online quiz at the end of the practical session). The total is 20%.
- A **final closed book examination** worth 50%.

Each lecture topic has a Topic work-through page, which were designed with a self-directed learning approach. There are five phases: **LEARN - DO - SUBMIT - COLLABORATE - ASSESS**. Once you've read through the lecture material and watched the lectures (either live or the the lecture recording) and attempted the practice questions for the Topic, you should attempt the Topic quiz. Students must achieve a mark of 7/10 for the quiz to count mark wise to the total and students are allowed 3 attempts to achieve that mark.

Student Learning Sequence

Introductory Video for CH1020

Sorry about the page format - I did this at home and did not realise until I had finished.

CH1020 SP1 2022 Townsville Subject Information Video

CH1020 Preparatory Chemistry

General Information

SP1 2022

Subject Coordinator:

Dr Murray Davies
Discipline of Chemistry,
College of Science and Engineering
Rm 142-327 (Science Place),
JCU Townsville Campus

Learning materials

Learning materials are arranged using folders named by topic and follows a consistent and logical format:

Learn – Do – Submit – Lecture – Collaborate – Assess. This consistency supports students to understand workload expectations and predict weekly progress.

CH1020 Learning Materials

Visible to students

The lecture recordings are in here. Each topic has separate lecture notes (PDF) and there is a combined set of lecture notes for the whole subject. Each topic also has a practice quiz with feedback (answers)

Chemical Numeracy

Visible to students

This folder contains a file explaining some of the mathematical concepts important in CH1020. It is not compulsory to read these notes, but it is strongly recommended to complete the practice quiz on the content. (not examined)

Introductory Information

Visible to students

Introduction and Topic 1: Matter: Types and Forms (Atoms & Elements)

Visible to students

Topic 2: Electron Configuration, Chemical Bonding, Types of Compounds & Mixtures

Visible to students

Topic 3: Chemical Bonding, Polarity and Molecular Shape

Visible to students

Topic 4: Organic Chemistry

Visible to students

Topic 5: Measurement units, moles, stoichiometry and concentrations

CH1020: Preparatory Chemistry

Topic 2: Patterns in the Periodic Table

Presented by Dr Murray Davies

Topic 2: Preliminary Warm-Up Activity

The periodic table as we know it has relatively consistent form. It is by no means the only arrangement of the periodic table out there. Your mission, should you choose to accept, is to scour the internet for other examples of the periodic table, then picking one, assess what its strengths and weaknesses are.

PERIODIC TABLE OF THE ELEPHANTS

(This is not a compulsory activity, it is suggested as something that people might find fun and interesting)

Key Activities

In this topic you will undertake the following learning activities:

1. ☒ Read the lecture notes, attend the live lectures and watch the lecture recordings (if required) on topic 2.
2. ☒ Attempt the tutorial questions and attend the tutorial sessions.
3. ☒ Complete the concept check questions that follow each lecture recording and the topic practice questions to check your understanding
4. ☒ Complete the Topic 2 quiz (assessment folder) and achieve a score of 7/10 or above for that quiz

Learn

- Watch the following video recordings below to assist your learning about the periodic table, and the reasons why atoms bond with one another.

- Complete the **topic 2 tutorial worksheet** (alongside the lecture recordings) and is the 'Do' activity. You may fill it out while watching the recorded tutorial video or attempt the questions first and then assess how you are doing by watching the videos. Note: the worked solutions to all tutorial questions are in a file with the entire set of tutorial questions in the "Whole Subject Materials" folder.

Learning activities & interaction

Use of technologies

Learner support

Information about what students can expect in laboratory practicals is provided in a separate folder. Content within is logically organized and includes information about safety and induction. Students can access a 'virtual laboratory walk-through' video created using a 3D camera. This interactive resource provides students with a valuable introduction to the laboratory environment using a virtual reality tool. *Note: The Create Team in LTSE have 3D cameras.*

-  Practicals
This folder contains the laboratory manual and a few other documents relating to the practicals. Students need to print out the lab manual. I suggest that DO NOT bind it together permanently but rather use clips to keep things organised.

-  CH1020 lab manual SP1 2022.pdf
This is the laboratory manual for the CH1020 practical experiments. Please read through the experiments prior to the practical sessions. Each experiment is assessed, in part, by an online quiz and on the basis of completion of the lab manual.

-  Use of Volumetric Glassware

-  Practicals/Online Safety Induction
You must complete the DTES online safety induction via the link (<https://dtes-inductions.jcu.edu.au/login.php>) BEFORE you enter the laboratory on campus."

-  Lab Induction Slides

-  Virtual laboratory walk-through
This link will allow you to virtually walk through the first year laboratory.
